

MAINTENANCE GUIDE

Floor Care at Home

Our floors have no grime and dirt traps, unlike many of the materials it faithfully replicates. Our Nano Silver protection system defends against those damages that can easily spoil the look of traditional floorings. Maintaining our floors is polish-free, greatly reducing both chemical and water usage (making it more environmentally friendly) compared to traditional maintenance routines.

Helpful tips:

- Avoid dragging or sliding heavy items e.g. furniture.
- Place non-rubber mattings on entrances.
- Mop up spillages as soon as possible to prevent stains.

Cleaning after Installation

Avoid walking on your new floor until the adhesive has dried, your floor fitter will advise on how soon you can do so. After it has dried, you should remove all loose debris from the floor using a vacuum, brush or dust mop. Ensure that all dry adhesive is removed from the surface and use a damp mop with a pH neutral detergent.

Routine Clean

Vacuum, sweep or mop to remove all dust and loose debris. Damp mop with a neutral detergent. Stubborn stains can be removed by spot cleaning with a concentrated pH neutral detergent and a kitchen non-abrasive scouring pad. Please do not use cleaning products that contain bleach or other household chemicals as they could make your floor unsafe and/or damage the floor.
